2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0548 Circle H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0548 Circle H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0548 Circle H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0548 Circle H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0548 Circle H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0452 Clancy Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0452 Clancy Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0452 Clancy Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	34	34	1 (100%)	0.89851	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	34	17	0.5 (50%)	0.28533	0.71467	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0452 Clancy Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	25	20	0.8 (80%)	0.58399	0.91936	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	25	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	25	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0452 Clancy Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0452 Clancy Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0032 Cleveland Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0032 Cleveland Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0032 Cleveland Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0032 Cleveland Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0032 Cleveland Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0032 Cleveland Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0595 Clinton Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

0595 Clinton Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	34	32	0.94 (94%)	0.80352	0.98429	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0595 Clinton Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0595 Clinton Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	27	18	0.67 (67%)	0.43749	0.83723	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	27	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	27	1	0.04 (4%)	0.00026	0.80842	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0595 Clinton Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0595 Clinton Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0387 Cohagen Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0387 Cohagen Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0387 Cohagen Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0387 Cohagen Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0387 Cohagen Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0387 Cohagen Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0387 Cohagen Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0796 Colstrip Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0796 Colstrip Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	82	80	0.98 (98%)	0.91427	0.99339	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	82	39	0.48 (48%)	0.32823	0.62736	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0796 Colstrip Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	56	37	0.66 (66%)	0.4996	0.79159	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	56	1	0.02 (2%)	0	0.80076	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	56	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

District Name 0796 Colstrip Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	16	1	0.06 (6%)	0.0009	0.81831	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0797 Colstrip H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	14	12	0.86 (86%)	0.57769	0.96342	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0797 Colstrip H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	37	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	16	0.89 (89%)	0.65617	0.97107	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0797 Colstrip H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0797 Colstrip H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	37	10	0.27 (27%)	0.0915	0.57651	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	37	2	0.05 (5%)	0.00137	0.69318	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	37	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0797 Colstrip H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District Name 0797 Colstrip H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0312 Columbia Falls Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

District Name

0312 Columbia Falls Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	18	1	0.06 (6%)	0.00069	0.81564	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	384	393	1 (100%)	0.99032	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	384	127	0.33 (33%)	0.25493	0.41647	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

0312 Columbia Falls Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	251	121	0.48 (48%)	0.39496	0.57027	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	251	16	0.06 (6%)	0.01147	0.28488	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	251	2	0.01 (1%)	-0.00003	0.66302	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0312 Columbia Falls Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	23	14	0.61 (61%)	0.35762	0.81297	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0312 Columbia Falls Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0313 Columbia Falls H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	24	10	0.42 (42%)	0.17901	0.70055	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0313 Columbia Falls H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	69	11	0.16 (16%)	0.04149	0.4536	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0313 Columbia Falls H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	40	38	0.95 (95%)	0.8308	0.9866	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0313 Columbia Falls H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	69	20	0.29 (29%)	0.13845	0.50894	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	69	18	0.26 (26%)	0.11401	0.49181	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	69	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0313 Columbia Falls H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0313 Columbia Falls H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0848 Columbus Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0848 Columbus Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0848 Columbus Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	46	40	0.87 (87%)	0.73237	0.94201	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	46	17	0.37 (37%)	0.18497	0.60223	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0848 Columbus Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0848 Columbus Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	35	20	0.57 (57%)	0.36093	0.7589	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	35	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	35	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0848 Columbus Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0849 Columbus H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0849 Columbus H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	24	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0849 Columbus H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0849 Columbus H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0849 Columbus H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	24	16	0.67 (67%)	0.42448	0.84433	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	24	3	0.12 (12%)	0.0103	0.66074	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	24	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0849 Columbus H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0849 Columbus H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0674 Conrad Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0674 Conrad Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0674 Conrad Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	62	64	1 (100%)	0.94339	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	62	18	0.29 (29%)	0.13328	0.5211	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5C	Education Environment Rate -- Sep Schls	51	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0674 Conrad Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	17	3	0.18 (18%)	0.01953	0.69666	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0674 Conrad Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0675 Conrad H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0675 Conrad H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	16	1	0.06 (6%)	0.0009	0.81831	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0675 Conrad H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0675 Conrad H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0675 Conrad H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	16	12	0.75 (75%)	0.4677	0.91108	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	16	1	0.06 (6%)	0.0009	0.81831	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	16	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0675 Conrad H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0617 Cooke City Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0617 Cooke City Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0617 Cooke City Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0617 Cooke City Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0617 Cooke City Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0617 Cooke City Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0617 Cooke City Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0731 Corvallis K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0731 Corvallis K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	62	3	0.05 (5%)	0.00164	0.6022	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0731 Corvallis K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	260	250	0.96 (96%)	0.92989	0.97922	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	260	90	0.35 (35%)	0.25599	0.44891	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0731 Corvallis K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0731 Corvallis K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	184	159	0.86 (86%)	0.80221	0.90886	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	184	6	0.03 (3%)	0.00146	0.42854	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	184	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0731 Corvallis K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	26	7	0.27 (27%)	0.07455	0.6274	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0731 Corvallis K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0182 Cottonwood Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0182 Cottonwood Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0182 Cottonwood Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0182 Cottonwood Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0182 Cottonwood Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0359 Cottonwood Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0359 Cottonwood Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0359 Cottonwood Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0359 Cottonwood Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0359 Cottonwood Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0359 Cottonwood Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0359 Cottonwood Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0445 Cottonwood Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0445 Cottonwood Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0445 Cottonwood Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0445 Cottonwood Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0445 Cottonwood Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0445 Cottonwood Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0316 Creston Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0316 Creston Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0316 Creston Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0316 Creston Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0777 Culbertson Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0777 Culbertson Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0777 Culbertson Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	52	50	0.96 (96%)	0.86761	0.98964	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0777 Culbertson Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0777 Culbertson Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	26	17	0.65 (65%)	0.41928	0.83171	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	26	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	26	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0777 Culbertson Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0778 Culbertson H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0778 Culbertson H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0778 Culbertson H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0778 Culbertson H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

0778 Culbertson H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0778 Culbertson H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0778 Culbertson H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0192 Custer County H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	19	14	0.74 (74%)	0.47525	0.89646	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0192 Custer County H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	85	5	0.06 (6%)	0.00388	0.49704	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0192 Custer County H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	46	48	1 (100%)	0.92592	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	46	12	0.26 (26%)	0.09495	0.54273	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0192 Custer County H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0192 Custer County H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	85	9	0.11 (11%)	0.01826	0.42923	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	85	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0192 Custer County H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent
Montana Office of Public Instruction
PO Box 202501

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0192 Custer County H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0975 Custer K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0975 Custer K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0975 Custer K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	16	1 (100%)	0.80643	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0975 Custer K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0975 Custer K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	10	1	0.1 (10%)	0.00239	0.83231	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	10	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	10	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0975 Custer K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0975 Custer K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0402 Cut Bank Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0402 Cut Bank Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0402 Cut Bank Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	94	92	0.98 (98%)	0.92486	0.99422	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	94	31	0.33 (33%)	0.19131	0.50578	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0402 Cut Bank Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0402 Cut Bank Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	62	8	0.13 (13%)	0.02363	0.47505	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	62	8	0.13 (13%)	0.02363	0.47505	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	62	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0402 Cut Bank Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	16	11	0.69 (69%)	0.39821	0.87975	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0402 Cut Bank Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0403 Cut Bank H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0403 Cut Bank H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	28	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0403 Cut Bank H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	22	22	1 (100%)	0.85138	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0403 Cut Bank H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0403 Cut Bank H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	28	4	0.14 (14%)	0.01676	0.6188	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	28	4	0.14 (14%)	0.01676	0.6188	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	28	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0403 Cut Bank H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0403 Cut Bank H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0740 Darby K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0740 Darby K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	26	1	0.04 (4%)	0.00029	0.80898	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0740 Darby K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	72	73	1 (100%)	0.95002	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	72	37	0.51 (51%)	0.35929	0.66588	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0740 Darby K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0740 Darby K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0424 Davey Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0424 Davey Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0424 Davey Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0424 Davey Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0424 Davey Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0424 Davey Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0424 Davey Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0207 Dawson H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	13	10	0.77 (77%)	0.46031	0.92874	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0207 Dawson H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	45	1	0.02 (2%)	0.00004	0.80252	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0207 Dawson H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0207 Dawson H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	45	4	0.09 (9%)	0.00697	0.57352	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	45	5	0.11 (11%)	0.0127	0.54737	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	45	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0207 Dawson H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0207 Dawson H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1195 Deep Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1195 Deep Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1195 Deep Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1195 Deep Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1195 Deep Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1195 Deep Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1193 Deer Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1193 Deer Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1193 Deer Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1193 Deer Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1193 Deer Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1193 Deer Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1193 Deer Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0712 Deer Lodge Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0712 Deer Lodge Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0712 Deer Lodge Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	144	150	1 (100%)	0.97504	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	144	35	0.24 (24%)	0.13119	0.40573	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0712 Deer Lodge Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0712 Deer Lodge Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	101	27	0.27 (27%)	0.13743	0.45516	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	101	14	0.14 (14%)	0.03817	0.39462	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	101	14	0.14 (14%)	0.03817	0.39462	0.018 (1.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0712 Deer Lodge Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	24	11	0.46 (46%)	0.21537	0.72285	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0712 Deer Lodge Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0307 Deer Park Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0307 Deer Park Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0307 Deer Park Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0307 Deer Park Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0264 Deerfield Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0264 Deerfield Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0264 Deerfield Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0264 Deerfield Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0264 Deerfield Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0264 Deerfield Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0281 Denton Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0281 Denton Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0281 Denton Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0281 Denton Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0281 Denton Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0281 Denton Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0281 Denton Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0282 Denton H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0282 Denton H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0282 Denton H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0282 Denton H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0282 Denton H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent
Montana Office of Public Instruction

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0282 Denton H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9034 Dept of Corrections-Youth

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	16	2	0.12 (12%)	0.00719	0.73595	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9034 Dept of Corrections-Youth

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	18	8	0.44 (44%)	0.17884	0.74607	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9034 Dept of Corrections-Youth

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9034 Dept of Corrections-Youth

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9034 Dept of Corrections-Youth

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	18	18	1 (100%)	0.82415	1.00001	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	18	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	18	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9034 Dept of Corrections-Youth

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent
Montana Office of Public Instruction

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9034 Dept of Corrections-Youth

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0592 DeSmet Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0592 DeSmet Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0592 DeSmet Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	46	46	1 (100%)	0.92295	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	46	15	0.33 (33%)	0.1469	0.57616	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0592 DeSmet Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0592 DeSmet Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	29	2	0.07 (7%)	0.00224	0.70252	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	29	1	0.03 (3%)	0.00022	0.80741	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	29	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0592 DeSmet Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0592 DeSmet Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0005 Dillon Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0005 Dillon Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator 3B	Assessment -- Participation Rates	118	110	0.93 (93%)	0.8692	0.96605	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	118	31	0.26 (26%)	0.1404	0.43733	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0005 Dillon Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0005 Dillon Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	80	38	0.48 (48%)	0.32596	0.62862	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	80	8	0.1 (10%)	0.01516	0.44429	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	80	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0005 Dillon Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	22	2	0.09 (9%)	0.00387	0.71592	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0005 Dillon Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0843 Divide Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0843 Divide Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0843 Divide Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0843 Divide Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0809 Dixon Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0809 Dixon Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0809 Dixon Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	20	20	1 (100%)	0.83891	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0809 Dixon Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0809 Dixon Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	13	5	0.38 (38%)	0.11012	0.75934	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	13	1	0.08 (8%)	0.00139	0.82377	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	13	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0809 Dixon Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0647 Dodson Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0647 Dodson Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0647 Dodson Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	22	1 (100%)	0.85138	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0647 Dodson Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	14	12	0.86 (86%)	0.57769	0.96342	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	14	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	14	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0647 Dodson Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0647 Dodson Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0648 Dodson H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0648 Dodson H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0648 Dodson H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0648 Dodson H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0648 Dodson H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0419 Drummond Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0419 Drummond Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0419 Drummond Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	30	18	0.6 (60%)	0.3762	0.78863	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	30	11	0.37 (37%)	0.15357	0.64877	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0419 Drummond Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0419 Drummond Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	21	9	0.43 (43%)	0.1784	0.72146	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	21	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	21	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0419 Drummond Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0420 Drummond H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0420 Drummond H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	17	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0420 Drummond H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0420 Drummond H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0420 Drummond H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	17	8	0.47 (47%)	0.19565	0.7646	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	17	2	0.12 (12%)	0.0064	0.73171	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	17	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0420 Drummond H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0420 Drummond H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0671 Dupuyer Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0671 Dupuyer Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0671 Dupuyer Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0671 Dupuyer Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0671 Dupuyer Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0671 Dupuyer Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0671 Dupuyer Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1235 Dutton/Brady K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1235 Dutton/Brady K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1235 Dutton/Brady K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	42	42	1 (100%)	0.91622	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	42	13	0.31 (31%)	0.12792	0.57799	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1235 Dutton/Brady K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1235 Dutton/Brady K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0404 East Glacier Park Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0404 East Glacier Park Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0404 East Glacier Park Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0404 East Glacier Park Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0404 East Glacier Park Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0404 East Glacier Park Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0492 East Helena Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0492 East Helena Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0492 East Helena Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	87	84	0.97 (97%)	0.90191	0.98841	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	87	2	0.02 (2%)	0.00019	0.67308	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	87	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0492 East Helena Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	12	10	0.83 (83%)	0.5238	0.95789	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0492 East Helena Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0073 Edgar Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0073 Edgar Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0073 Edgar Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0073 Edgar Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0073 Edgar Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0073 Edgar Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0087 Ekalaka Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0087 Ekalaka Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0087 Ekalaka Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	18	1 (100%)	0.82416	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0087 Ekalaka Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0087 Ekalaka Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0087 Ekalaka Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0087 Ekalaka Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0972 Elder Grove Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0972 Elder Grove Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0972 Elder Grove Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	60	62	1 (100%)	0.94167	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	60	29	0.48 (48%)	0.31435	0.65621	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0972 Elder Grove Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name

0972 Elder Grove Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	39	22	0.56 (56%)	0.36314	0.74601	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	39	2	0.05 (5%)	0.00123	0.69142	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	39	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0972 Elder Grove Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0972 Elder Grove Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0719 Elliston Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0719 Elliston Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	16	14	0.88 (88%)	0.62087	0.96769	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	16	12	0.75 (75%)	0.4677	0.91109	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0719 Elliston Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0719 Elliston Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0719 Elliston Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0981 Elysian Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0981 Elysian Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0981 Elysian Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	24	24	1 (100%)	0.86205	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0981 Elysian Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0981 Elysian Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	19	11	0.58 (58%)	0.30648	0.81055	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0981 Elysian Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0546 Ennis K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0546 Ennis K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	18	1 (100%)	0.82416	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0546 Ennis K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0546 Ennis K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	24	11	0.46 (46%)	0.21537	0.72285	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	24	2	0.08 (8%)	0.00326	0.71134	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	24	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0546 Ennis K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0546 Ennis K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0527 Eureka Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0527 Eureka Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0527 Eureka Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	94	79	0.84 (84%)	0.74422	0.90507	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	94	20	0.21 (21%)	0.08835	0.42971	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0527 Eureka Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0527 Eureka Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	62	0	0 (0%)	0	0	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	62	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	62	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0527 Eureka Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	13	0	0 (0%)	0	0	0.548 (54.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0527 Eureka Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0339 Evergreen Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0339 Evergreen Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0339 Evergreen Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	146	148	1 (100%)	0.97471	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	146	47	0.32 (32%)	0.20624	0.4645	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5C	Education Environment Rate -- Sep Schls	124	21	0.17 (17%)	0.06436	0.37657	0.018 (1.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0339 Evergreen Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	13	4	0.31 (31%)	0.06535	0.73841	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0339 Evergreen Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0890 Fairfield Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0890 Fairfield Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0890 Fairfield Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	22	24	1 (100%)	0.86205	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0890 Fairfield Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0890 Fairfield Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	9	0.6 (60%)	0.30046	0.83972	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	1	0.07 (7%)	0.00103	0.8199	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0890 Fairfield Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0891 Fairfield H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0891 Fairfield H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0891 Fairfield H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0891 Fairfield H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0891 Fairfield H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0891 Fairfield H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0891 Fairfield H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0308 Fair-Mont-Egan Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0308 Fair-Mont-Egan Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0308 Fair-Mont-Egan Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0308 Fair-Mont-Egan Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	18	15	0.83 (83%)	0.5839	0.94688	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	18	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	18	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0308 Fair-Mont-Egan Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0308 Fair-Mont-Egan Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0750 Fairview Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0750 Fairview Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0750 Fairview Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	26	26	1 (100%)	0.8713	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0750 Fairview Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

District Name

0750 Fairview Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	23	17	0.74 (74%)	0.50145	0.88868	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	23	1	0.04 (4%)	0.00039	0.81095	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	23	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0750 Fairview Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0751 Fairview H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0751 Fairview H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	21	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0751 Fairview H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	16	1 (100%)	0.80643	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0751 Fairview H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0751 Fairview H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	21	12	0.57 (57%)	0.30978	0.79843	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	21	2	0.1 (10%)	0.00424	0.71851	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	21	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0751 Fairview H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0751 Fairview H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0259 Fergus H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	15	13	0.87 (87%)	0.60042	0.96568	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0259 Fergus H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	60	3	0.05 (5%)	0.00175	0.6035	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0259 Fergus H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	22	24	1 (100%)	0.86205	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0259 Fergus H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0259 Fergus H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	60	34	0.57 (57%)	0.40186	0.71793	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	60	5	0.08 (8%)	0.00748	0.52117	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	60	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0259 Fergus H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0259 Fergus H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0853 Fishtail Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0853 Fishtail Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0853 Fishtail Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0853 Fishtail Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0853 Fishtail Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0853 Fishtail Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0311 Flathead H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	42	32	0.76 (76%)	0.5916	0.87608	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0311 Flathead H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	174	20	0.11 (11%)	0.03469	0.31923	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0311 Flathead H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	60	59	0.98 (98%)	0.9105	0.99709	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	60	17	0.28 (28%)	0.12571	0.5208	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0311 Flathead H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0311 Flathead H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	174	59	0.34 (34%)	0.23145	0.46637	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	174	31	0.18 (18%)	0.08171	0.34555	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	174	2	0.01 (1%)	0	0.6654	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0311 Flathead H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0743 Florence-Carlton K-12 Schls

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0743 Florence-Carlton K-12 Schls

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	45	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0743 Florence-Carlton K-12 Schls

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0743 Florence-Carlton K-12 Schls

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	113	70	0.62 (62%)	0.50233	0.72417	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	113	8	0.07 (7%)	0.00818	0.41181	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	113	1	0.01 (1%)	-0.00006	0.7971	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0743 Florence-Carlton K-12 Schls

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0743 Florence-Carlton K-12 Schls

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0790 Forsyth Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0790 Forsyth Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0790 Forsyth Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	50	49	0.98 (98%)	0.89371	0.99652	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	50	10	0.2 (20%)	0.05665	0.50983	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	37	5	0.14 (14%)	0.01809	0.56916	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	37	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0790 Forsyth Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	11	9	0.82 (82%)	0.49158	0.95446	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0790 Forsyth Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0791 Forsyth H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0791 Forsyth H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	19	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0791 Forsyth H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0791 Forsyth H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0791 Forsyth H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	19	9	0.47 (47%)	0.20832	0.75478	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	2	0.11 (11%)	0.00516	0.72446	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0791 Forsyth H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0133 Fort Benton Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0133 Fort Benton Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	28	28	1 (100%)	0.87938	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0133 Fort Benton Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0133 Fort Benton Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	19	9	0.47 (47%)	0.20832	0.75478	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	1	0.05 (5%)	0.00061	0.81451	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0133 Fort Benton Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0133 Fort Benton Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0134 Fort Benton H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0134 Fort Benton H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	14	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0134 Fort Benton H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0134 Fort Benton H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	14	0	0 (0%)	0	0	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	14	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	14	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0134 Fort Benton H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0134 Fort Benton H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0529 Fortine Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0529 Fortine Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0529 Fortine Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0529 Fortine Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

District Name

0529 Fortine Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0529 Fortine Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0927 Frazer Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0927 Frazer Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	20	20	1 (100%)	0.83891	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0927 Frazer Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0927 Frazer Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	13	10	0.77 (77%)	0.46031	0.92874	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	13	2	0.15 (15%)	0.01069	0.7522	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	13	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0927 Frazer Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0927 Frazer Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0928 Frazer H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0928 Frazer H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	15	2	0.13 (13%)	0.00814	0.74071	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0928 Frazer H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	12	0.8 (80%)	0.51728	0.93726	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	1	0.07 (7%)	0.00103	0.8199	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0928 Frazer H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0928 Frazer H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0599 Frenchtown K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0599 Frenchtown K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	58	2	0.03 (3%)	0.00052	0.68062	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0599 Frenchtown K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	144	146	1 (100%)	0.97437	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	144	30	0.21 (21%)	0.10065	0.38221	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5C	Education Environment Rate -- Sep Schls	130	2	0.02 (2%)	0.00005	0.66801	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0599 Frenchtown K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	18	4	0.22 (22%)	0.03701	0.67953	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0599 Frenchtown K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0786 Froid Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0786 Froid Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0786 Froid Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	14	10	0.71 (71%)	0.40951	0.90015	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0786 Froid Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0786 Froid Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0786 Froid Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0787 Froid H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0787 Froid H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0787 Froid H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0787 Froid H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District Name

0787 Froid H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0071 Fromberg Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0071 Fromberg Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	32	26	0.81 (81%)	0.62658	0.91799	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0071 Fromberg Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0071 Fromberg Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0072 Fromberg H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0072 Fromberg H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0072 Fromberg H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0072 Fromberg H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0072 Fromberg H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0072 Fromberg H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0774 Frontier Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	32	30	0.94 (94%)	0.79237	0.98334	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0774 Frontier Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	20	12	0.6 (60%)	0.33328	0.81823	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	20	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	20	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0774 Frontier Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District Name 0774 Frontier Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0915 Galata Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0915 Galata Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0915 Galata Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0915 Galata Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.
